

PRODUCT DESCRIPTION

SFF TANINOS DE QUEBRACHO®

¡FREE OF PARASITES, BETTER DIGESTIBILITY!

Quebracho® Tannins are substances commonly present in nature that serve as plant defense mechanisms and can also reduce the risk of animal diseases to zoonotic pathogens in a sustainable and environmentally friendly way.

Tannins are secondary plant metabolites that are part of the chemical defense system of plants against pathogens and insects.

BENEFITS

As an alternative growth promoter to antibiotics to improve the performance and health of poultry and pigs.

- Dramatically reduces fecal production of nematode eggs (*Ascaridia* spp and *Heterakis* spp) and coccidia oocytes (*Eimeria* spp).
- Reduces the number of gastrointestinal parasites.
- Improves feed efficiency.
- Increases weight gain of broilers and pigs.
- Increases egg production in laying hens.
- Reduces the levels of mycotoxins in the feed.

INGREDIENTS

NAME	CONCENTRATION (%)
Quebracho Tannins	80%

RECOMMENDED DOSE

Quebracho® tannins at a dose of:
Preventive: 1 kg / Tn of balanced feed.
